Helminth fauna of the Eurasian Marsh Frog, *Pelophylax ridibundus* (Pallas, 1771) (Anura: Ranidae), collected from Denizli Province, Inner-West Anatolia Region, Turkey

S. DÜŞEN^{1*}, M. ÖZ²

¹*Pamukkale University, Faculty of Arts and Sciences, Department of Biology, Kinikli Campus, 20017, Denizli, Turkey, E-mail: sdusen@pamukkale.edu.tr, serdar2290@yahoo.com; ²Akdeniz University Faculty of Science, Department of Biology, 07058, Antalya, Turkey

Summary

In this research, a total of 298 Eurasian marsh frogs, *Pelophylax ridibundus* (Pallas, 1771) were collected from different localities in Denizli province (Inner-west Anatolia Region, the eastern part of Aegean Region) Turkey between 2006 and 2009 and examined for helminths. Of 262 (87.91 %) *Pelophylax ridibundus* samples were infected with one or more helminths. *Pelophylax ridibundus* harbored eight species of digeneans (*Diplodiscus subclavatus*, *Gorgoderina vitelliloba*, *Gorgodera cygnoides*, *Pleurogenoides medians*, *Prostotocus confusus*, *Skrjabinoeces breviansa*, *Encyclometra colubrimurorum* and *Ophistoglyphe ranae*), one species of cestode (*Nematotaenia dispar*), two species of acanthocephalans (*Acanthocephalus ranae* and *Pomphorhynchus laevis*), and six species of nematodes (*Rhabdias bufonis*, *Oswaldocruzia filiformis*, *Cosmocerca ornata*, *Oxysomatium brevicaudatum*, *Eustrongyliides* sp. and *Abbreviata* sp.). *P. ridibundus* represents a host record for *Nematotaenia dispar* in Turkey.

Keywords: Amphibians, Denizli, Helminth, *Pelophylax ridibundus*, Turkey

Introduction

The Eurasian marsh frog, *Pelophylax ridibundus* (formerly known as *Rana ridibunda*), is a medium-sized semi-aquatic anuran species. *P. ridibundus* inhabits lakes, pools, or slowly flowing streams. It is a highly opportunistic diurnal amphibian, living in mixed and deciduous forests, forest steppe, and steppe and other grasslands, semi-desert and desert zones. Arid areas are largely colonized through river valleys and channels. *P. ridibundus* prefers open, well-warmed areas with abundant herbaceous vegetation (IUCN, 2012). In Turkey, this species is known in all suitable habitats except for a portion of the Lakes District (Baran & Atatür, 1997; Budak & Göçmen, 2008).

To our knowledge, the first helminthological study in Eurasian marsh frog, *P. ridibundus* (formerly known as *Rana ridibunda*) was reported by Schad *et al.* (1960) and they recorded only two nematodes in this species from Turkey. Other helminthological studies on *P. ridibundus* published by Saygı and Başbüyük (1990), Oğuz *et al.* (1994), Yıldırımhan *et al.* (1996, 1997, 2005a), Kır *et al.* (2001), Düsen and Öz (2006), Sağlam and Arikán (2006), Ünal *et al.* (2007), Düsen and Oğuz (2008, 2010), Düsen *et al.* (2010a), Heckmann *et al.* (2010, 2011) in Turkey.

So far, there has been no published detailed study on helminths of Eurasian marsh frog, *P. ridibundus* from Denizli province (Inner-west Anatolia Region - the eastern part of Aegean Region) in Turkey. This is the first detailed helminthological study, which has been done in this geographic area.

Materials and methods

Frog samples were collected by hand and dip net, between 2006 – 2009 from 17 different localities in Denizli province (38°29' – 38° 52' N – 28°38' – 30° 05' E). In total, 298 *P. ridibundus* (197♂, 101♀) were examined for helminth parasites. The mean ± SD snout-vent length (SVL) of specimens was 66.34 ± 14.91 mm, with a range from 29 to 101 mm; within 24 hr, toads were overdosed in ether-filled glass containers.

The samples body cavity was opened by a longitudinal ventral incision. The alimentary canal was excised and separated into stomach, small intestine, large intestine and rectum. The contents of each part and other organs (lungs, liver, gall bladder, kidneys and urinary bladder) were each mixed with 0.5 % saline solution and poured into petri dishes for examination under a stereomicroscope. The muscles, plus portions of peritoneum and spinal cord, were teased out with needles and examined under a stereomicro-

scope. Digeneans was immobilized by coverslip pressure in 70 % ethyl alcohol, fixed, and stored in 70 % ethanol. Nematodes was straightened by heat, fixed, and stored in 70 % ethyl alcohol with 5 % glycerol. Acanthocephalans were relaxed in saline and heat-fixed under slight coverslip pressure in warm ethyl alcohol-formalin-acetic acid. Digeneans, acanthocephalans and cestode samples were stained with acetocarmine, dehydrated, cleared in cedar oil or xylol, and mounted in Canada Balsam; nematodes were cleared in glycerol and examined. Intensities are presented as mean values (± 1 SE) followed by the range. Voucher host specimens and parasite specimens were deposited in Pamukkale University, Faculty of Sciences and Arts, Department of Biology, Denizli, Turkey (PAU-HELM-1-17/2009).

Results and discussion

Two-hundred and ninety eight *P. ridibundus* (197♂♂, 101♀♀) samples were collected between 2006 – 2009 years from Denizli province.

Trematoda

Family: Diplodiscidae

Diplodiscus subclavatus (Pallas, 1760) Diesing, 1836

Prevalence, intensity and range: Hosts infected, 31 of 298 (10.40 %, 4.03 ± 0.65 SE, 1 – 15).

Other reported hosts: *D. subclavatus* was observed in, *Triturus cristatus*, *T. vulgaris*, *Bufo viridis*, *Hyla arborea* (Shimalov et al., 2001; Vojtková & Vojtek 1975, Buchvarov 1977, Kuc & Sulgostowska 1988b, Sey 1991); *H. savignyi* (Yıldırımhan et al., 2012); *Rana temporaria*, *R. dalmatina*, *R. esculenta*, *R. graeca* (Vojtková & Vojtek 1975; Buchvarov, 1977; Kuc & Sulgostowska, 1988b; Sey, 1991; Düşen et al., 2009), *Bombina bombina*, *Bo. variegata* (Vojtková & Vojtek, 1975; Grabda-Kazubska & Lewin, 1989), *Pelobates syriacus balcanicus* (Buchvarov, 1977), *T. alpestris*, *P. fuscus*, *R. lessonae* (Vojtková & Vojtek, 1975), *B. bufo*, *R. arvalis* (Vojtková & Vojtek, 1975; Sey 1991; Shimalov & Shimalov, 2001), *R. holtzi* (Topçu, 2002; Yıldırımhan et al., 2006b), *Natrix natrix* (Sey, 1991; Buchvarov et al., 2000; Shimalov & Shimalov, 2000), *N. tessellata* (Buchvarov et al., 2000), *Vipera berus* (Shimalov & Shimalov, 2000) and *Esox lucius* (Öztürk et al., 2000).

Geographic range: Europe (Yamaguti, 1958), Czech Republic (Vojtková & Vojtek, 1975), Bulgaria (Buchvarov et al., 1975; Buchvarov, 1977), Poland (Kuc & Sulgostowska, 1988a, 1988b; Grabda-Kazubska & Lewin, 1989), Hungaria (Sey, 1991), Turkey (Oğuz et al., 1994), Iran (Masshaii et al., 2000), Uzbekistan (Vashetko & Siddikov, 1999).

Specimens deposited: PAU-HELM-1/2009

Family: Gorgoderidae

Gorgoderina vitelliloba (Olsson, 1876) Loos, 1902

Prevalence, intensity and range: Hosts infected, 20 of 298 (6.71 %, 2.55 ± 0.81 SE, 1 – 13).

Other reported hosts: *G. vitelliloba* was reported in, *Bombyinator igneus* (Yamaguti, 1958), *Bo. bombina* (Vojtková

& Vojtek, 1975), *Bo. variegata*, (Yamaguti, 1958; Vojtková & Vojtek, 1975; Buchvarov, 1977) *B. bufo* and *B. calamita* (Cedhagen, 1988), *B. viridis* (Buchvarov, 1977), *R. arvalis* (Yamaguti, 1958; Vojtková & Vojtek, 1975), *R. dalmatina* (Buchvarov, 1977), *R. esculenta*, (Vojtková & Vojtek, 1975), *R. temporaria* (Yamaguti, 1958; Vojtková & Vojtek, 1975; Buchvarov, 1977; Cedhagen, 1988), *R. macrocnemis* (Yıldırımhan et al., 1997b; Yıldırımhan et al., 2006a), *R. camerani* (Yıldırımhan et al., 2006a) and *R. holtzi* (Yıldırımhan et al., 2006b).

Geographic range: Europe and North America (Yamaguti, 1958), Czech Republic (Vojtková & Vojtek, 1975), Bulgaria (Buchvarov, 1977), Poland (Kuc & Sulgostowska, 1988a, 1988b), Turkey (Yıldırımhan et al., 1996; Düşen & Öz, 2006).

Specimens deposited: PAU-HELM-2/2009

Family: Gorgoderidae

Gorgodera cygnoides (Zeder, 1800)

Prevalence, intensity and range: Hosts infected, 36 of 298 (12.08 %, 3.83 ± 0.70 SE, 1 – 17).

Other reported hosts: *G. cygnoides* is a common parasite of amphibians, *Bombyinator igneus* (Yamaguti, 1958), *Bo. Bombina* and *Bo. variegata* (Vojtková & Vojtek, 1975), *B. viridis* (Buchvarov, 1977; Shimalov & Shimalov, 2001), *H. arborea* (Yamaguti, 1958), *R. arvalis* (Vojtková & Vojtek, 1975), *R. dalmatina* (Buchvarov, 1983), *R. esculenta* (Yamaguti, 1958; Vojtková & Vojtek, 1975; Buchvarov, 1977; Kuc & Sulgostowska, 1988b), *R. lessonae* (Vojtková & Vojtek, 1975), *R. clamitans* (Yamaguti, 1958), *R. temporaria* (Yamaguti, 1958; Vojtková & Vojtek, 1975), *R. camerani* (Yıldırımhan et al., 2006a), *R. holtzi* (Yıldırımhan et al., 2006b), *R. kurtmuelleri* (Hristovski et al., 2006) and *Pelodytes caucasicus* (Yıldırımhan et al., 2009).

Geographic range: Western Europe (Yamaguti, 1958) Turkey (Yıldırımhan et al., 1996; Düşen & Öz, 2006).

Specimens deposited: PAU-HELM-3/2009

Family: Lecithodendriidae

Pleurogenoides medians (Olsson, 1876) Travassos, 1921

Prevalence, intensity and range: Hosts infected, 47 of 298 (15.77 %, 27.70 ± 4.57 SE, 1 – 126).

Other reported hosts: *P. medians* has been reported in various amphibians and reptiles species, *T. cristatus* (Shimalov et al., 2001), *T. vulgaris* (Vojtková & Vojtek, 1975; Shimalov et al., 2001); *Bo. bombina*, (Vojtková & Vojtek, 1975), *Bo. variegata*, (Vojtková & Vojtek, 1975), *B. bufo* (Shimalov & Shimalov, 2001), *B. calamita*, (Vojtková & Vojtek, 1975), *B. vulgaris* (Yamaguti, 1958), *B. viridis* (Düşen et al., 2010; Düşen & Oğuz, 2010), *H. arborea* (Vojtková & Vojtek, 1975; Düşen & Öz, 2004), *H. savignyi* (Yıldırımhan et al., 2012), *R. arvalis* (Vojtková & Vojtek, 1975), *R. camerani* (Yıldırımhan et al., 2006a; Düşen, 2007), *R. dalmatina* (Buchvarov, 1977; Düşen et al., 2009), *R. esculenta* (Vojtková & Vojtek, 1975; Buchvarov, 1977; Kuc & Sulgostowska, 1988b), *R. macrocnemis* (Yıldırımhan et al., 2006b; Düşen, 2007), *R. arvalis* (Vojtková & Vojtek, 1975), *R. temporaria* (Vojtková &

Vojtek, 1975; Cedhagen, 1977), *R. holtzi* (Topçu, 2002), *Lacerta trilineata* (Yamaguti, 1963; Yıldırımhan *et al.*, 2011), *N. natrix* (Kirin, 2000b) and *Atheris hispida* (Hassl, 2010; Hassl *et al.*, 2010).

Geographic range: Europe and Asia (Yamaguti, 1958); Australasian Regions (Prudhoe & Bray, 1982).

Specimens deposited: PAU-HELM-4/2009

Family: Lecithodendriidae

Prosotocus confusus (Loos, 1894) Loos, 1899

Prevalence, intensity and range: Hosts infected, 23 of 298 (7.72 %, 5.82 ± 1.33 SE, 1 – 33).

Other reported hosts: *R. esculenta* (Yamaguti, 1958; Vojtková & Vojtek, 1975; Buchvarov, 1977; Kuc & Sulgostowska, 1988b), *B. viridis* (Yamaguti, 1958; Vojtková & Vojtek, 1975), *B. vulgaris* (Yamaguti, 1958), and *Bo. variegata*, *B. bufo*, *B. calamita*, *H. arborea*, *R. temporaria*, *R. arvalis* (Vojtková & Vojtek, 1975; Buchvarov, 1977). This species is only observed in *R. ridibunda* (Yıldırımhan *et al.*, 1996, 2005a; Düşen & Öz 2006) from Turkey. *Geographic range:* Europe and Asia (Yamaguti, 1958), Turkey (Yıldırımhan *et al.*, 1996, 2005a; Düşen & Öz 2006).

Specimens deposited: PAU-HELM-5/2009

Family: Plagiorchiidae

Skrjabinoeces breviansa (Sudarikov, 1950)

Prevalence, intensity and range: Hosts infected, 29 of 298 (9.73 %, 5.34 ± 1.10 SE, 1 – 35).

Other reported hosts: Sey and Eory (1992) were reported *Skrjabinoeces breviansa* in *R. ridibunda* from Hungary, Mashaii *et al.* (2000) were reported *S. breviansa* in *R. ridibunda* from Northern parts of Iran. Kovalenko (2007) was recorded this digenean in *R. ridibunda* and *R. esculenta* from Ukraine. Yıldırımhan *et al.* (2005a), Düşen and Öz (2006), Düşen and Oğuz (2010) were recorded this helminth species in *R. ridibunda* from Turkey.

Geographic range: Europe, Russia (Yamaguti, 1958), Turkey (Yıldırımhan *et al.*, 2005a; Düşen and Öz (2006), and Iran (Mashaii *et al.*, 2000).

Specimens deposited: PAU-HELM-6/2009

Family: Plagiornchiidae

Encyclometra colubrimurorum (Rudolphi, 1819) Dollfus, 1922 (Metacercariae)

Prevalence, intensity and range: Hosts infected, 7 of 298 (2.35 %, 2.43 ± 1.11 SE, 1 – 8).

Other reported hosts: *R. tigrina*, *Xenochnopsis piscator*, *Coluber gemonensis*, *Ptyas mucosus*, (Yamaguti, 1958); *N. natrix* (Yamaguti, 1958; Shimalov & Shimalov, 2000; Mihalca *et al.*, 2007); *Bo. bombina*, *P. fuscus*, *B. viridis*, *R. dalmatina*, *R. temporaria* (Vojtková & Vojtek, 1975); *R. esculenta* (Buchvarov, 1977); *H. arborea* (Vojtková & Vojtek, 1975; Düşen & Öz, 2004). The definitive host of *E. colubrimurorum* is a colubrid snake, *N. natrix* (grass snake) (Liang-Sheng, 1958), *E. colubrimurorum* parasitised *P. ridibundus* as an intermediate host. Düşen and Öz (2006) observed this digenean from *R. ridibunda* in An-

talya region in Turkey.

Geographic range: Europe, Asia (Yamaguti, 1958); Czech Republic, France, Italy, Russia, The Netherlands (Vojtková & Vojtek, 1975); Iran (Masshaii *et al.*, 2000); Turkey (Düşen & Öz, 2004; Düşen & Öz, 2006).

Specimens deposited: PAU-HELM-7/2009

Family: Telorchidae

Opisthoglyphe ranae (Froelich, 1791)

Prevalence, intensity and range: Hosts infected, 4 of 298 (1.34 %, 4.75 ± 0.85 SE, 3 – 7).

Other reported hosts: The reported hosts of *O. ranae* were, *Salamandra maculosa* (Vojtková & Vojtek, 1975; Buchvarov, 1977); *T. cristatus* (Yamaguti, 1958; Shimalov *et al.*, 2001), *T. vulgaris* (Shimalov *et al.*, 2001), *Bo. bombina* (Vojtková & Vojtek, 1975; Yıldırımhan *et al.*, 2001a), *Bo. variegata* (Vojtková & Vojtek, 1975), *B. bufo* (Shimalov & Shimalov, 2001), *B. calamita* (Yamaguti, 1958; Shimalov & Shimalov, 2001), *B. vulgaris*, *B. variabilis*, (Yamaguti, 1958), *B. viridis*, (Vojtková & Vojtek, 1975; Buchvarov, 1977), *H. arborea* (Vojtková & Vojtek, 1975; Buchvarov, 1977), *P. fuscus* (Vojtková & Vojtek, 1975); *R. dalmatina* (Vojtková & Vojtek, 1975; Buchvarov, 1977), *R. esculenta* (Yamaguti, 1958; Vojtková & Vojtek, 1975; Buchvarov, 1977), *R. lessonae* (Vojtková & Vojtek, 1975), *R. temporaria* (Yamaguti, 1958; Vojtková & Vojtek, 1975; Buchvarov, 1977), *R. arvalis* (Vojtková & Vojtek, 1975), *R. camerani* (Yıldırımhan *et al.*, 2006a), *R. holtzi* (Topçu, 2002), *N. Natrix* and *V. berus* (Shimalov & Shimalov, 2000).

Geographic range: Europe (Yamaguti, 1958), Turkey (Yıldırımhan *et al.*, 1996; Düşen & Öz, 2006), Saudi Arabia (Fernando, 1989), Iran (Masshaii *et al.*, 2000).

Specimens deposited: PAU-HELM-8/2009

Cestoda

Family: Nematotaeniidae

Nematotaenia dispar (Goeze, 1782) Lühe, 1899

Prevalence, intensity and range: 2 of 298 hosts infected (0.67 %, 2, 2).

Other reported hosts: *N. dispar* is commonly parasitic in the intestines of amphibians, but rarely reptiles of the Oriental, Nearctic, and Palearctic regions (Prudhoe & Bray, 1982), including *Bo. bombina* (Buchvarov, 1977), *Bo. variegata* (Buchvarov, 1977; Prudhoe & Bray, 1982), *B. bufo* (Hristovski & Riggio, 1971; Prudhoe & Bray, 1982), *B. alvarius* (Goldberg & Bursey, 1991), *H. arborea* (Hristovski & Riggio, 1974; Buchvarov, 1977; Prudhoe & Bray, 1982; Vashetko & Siddikkov, 1999; Saeed *et al.*, 2007), *H. savignyi* (Al-Sorkhy & Amr, 2003; Mashaii, 2005; Yıldırımhan *et al.* 2012), *R. temporaria* (Hristovski & Lees, 1973; Buchvarov, 1997), *R. dalmatina* (Buchvarov, 1977), *Mertensiella caucasica* (Yıldırımhan *et al.*, 2001b; 2005b), *Amietophryalus (Bufo) regularis* (Ibrahim, 2008), *B. viridis* (Hristovski & Riggio, 1971; Buchvarov, 1977; Yıldırımhan, 1999; Düşen, 2003, 2011; Saeed *et al.*, 2007; Mashaii *et al.*, 2008; Düşen *et al.*, 2010a; Düşen & Oğuz,

2010), *R. camerani* (Yıldırımhan et al., 2006a). Buchvarov (1977) recorded this cestode in *R. ridibunda* from, Bulgaria.

Geographic range: Palaearctic, Oriental and Australian regions (Prudhoe & Bray, 1982; Al-Sorkhy & Amr, 2003). *Nematotaenia dispar* is first time observed in *P. ridibundus* from Turkey.

Specimens deposited: PAU-HELM-9/2009

Nematoda

Family: Rhabdiasidae

Rhabdias bufonis (Schrank, 1788) Stiles and Hassal, 1905

Prevalence, intensity and range: 19 of 298 hosts infected (6.37 %, 2.05 ± 0.23 SE, 1 – 10).

Other reported hosts: *R. bufonis* is known from various amphibian species including, *Bufo* sp., *Rana* sp., *Pelobates* sp., *Bombinator* sp., *Anguis fragilis* (Yamaguti, 1961; Düşen et al., 2010b), *Bo. bombina* (Grabda-Kazubska & Lewin, 1989; Yıldırımhan et al., 2001a), *Pe. caucasicus* (Yıldırımhan et al., 2009), *R. esculenta* (Buchvarov, 1977; Kuc & Sulgostowska, 1988b), *Bo. variegata*, *P. syriacus* (Buchvarov, 1977), *B. viridis* (Buchvarov et al., 1975; Buchvarov, 1977; Yıldırımhan, 1999a; Shimalov & Shimalov, 2001; Düşen, 2011), *B. bufo* (Buchvarov, 1977; Shimalov & Shimalov, 2001; Yıldırımhan & Karadeniz, 2007; Düşen, 2011), *B. calamita* (Shimalov & Shimalov, 2001), *Amietophrynum (Bufo) regularis* (Ibrahim, 2008), *R. temporaria*, *R. arvalis* (Kuc & Sulgostowska, 1988b; Cedhagen, 1988), *R. dalmatina* (Buchvarov et al., 1975; Buchvarov, 1977; Düşen et al., 2009), *R. camerani* (Yıldırımhan et al., 2006a), *R. macrocnemis* (Yıldırımhan et al., 2006b).

Geographic range: Europe, Siberia, China, Canada, U.S.A. (Yamaguti, 1961).

Specimens deposited: PAU HEL-10/2009

Family: Molineidae

Oswaldocruzia filiformis (Goeze, 1782) Travassos, 1917

Prevalence, intensity and range: 17 of 298 hosts infected (5.70 %, 2.47 ± 0.70 SE, 1 – 10).

Other reported hosts: *O. filiformis* is recorded from various amphibian and reptile species, including *Salamandra salamandra* (Buchvarov, 1977), *T. alpestris* and *T. karelinii* (Buchvarov, 1977; Cedhagen 1988; Kirin & Buchvarov, 2002), *T. vulgaris* (Buchvarov, 1977; Shimalov et al., 2001), *T. vittatus* (Yıldırımhan, 2008), *Bo. bombina* and *Bo. variegata* (Buchvarov, 1977; Kirin & Buchvarov, 2002), *B. regularis* (probably *Bufo viridis*) (Schad et al., 1960), *B. viridis* (Buchvarov, 1977; Yıldırımhan, 1999; Shimalov & Shimalov, 2001; Topcu & Bayrak, 2000; Düşen et al., 2010a; Düşen & Oğuz, 2010), *B. bufo* (Buchvarov, 1977; Yıldırımhan & Karadeniz, 2007; Düşen & Oğuz, 2010; Düşen, 2011); *Pe. caucasicus* (Yıldırımhan et al., 2009), *H. arborea* (Buchvarov, 1977; Yıldırımhan et al., 2006c), *R. camerani* (Yıldırımhan et al., 2006a); *H. savignyi* (Yıldırımhan et al., 2012); *R. dalmatina*, (Buchvarov et al., 1975; Buchvarov, 1977; Kirin & Buchvarov, 2002; Düşen et al., 2009), *R. kurtmuelleri* (Hristovski et

al., 2006), *R. macrocnemis* (Schad et al., 1960; Yıldırımhan et al., 1997b; Yıldırımhan et al., 2006b), *R. temporaria*, (Buchvarov, 1977; Cedhagen, 1988; Kirin & Buchvarov, 2002), *R. graeca* (Božkov & Stojkova, 1970; Buchvarov, 1977), *L. agilis*, (Sharpilo et al., 2001; Shimalov et al., 2000; Mihalca et al., 2007), *L. trilineata* (Yıldırımhan et al., 2011), *L. viridis* (Biserkov & Kostadinova, 1998; Yıldırımhan, 1999b; Kirin, 2002a; Borkovcová & Kopřiva, 2005), *L. vivipara* (Shimalov et al., 2000), *A. fragilis* (Schad et al., 1960; Bertman & Okulewicz, 1987; Shimalov et al., 2000; Borkovcová & Kopřiva 2005; Düşen et al., 2010b), *Zootoca vivipara* (Sanchis et al., 2000), *N. natrix* (Bertman & Okulewicz, 1987; Shimalov & Shimalov, 2000; Kirin 2002b) and *V. berus* (Shimalov & Shimalov, 2000).

Geographic range: Europe and Asia (Yamaguti, 1961).

Specimens deposited: PAU-HELM-11/2009

Family: Cosmocercidae

Cosmocerca ornata (Dujardin, 1845)

Prevalence, intensity and range: 114 of 298 hosts were infected (38.25 %, 5.28 ± 0.75 SE, 1 – 47).

Other reported hosts: There are several papers reporting *C. ornata* from many species of amphibians and reptiles, including *Bufo*, *Hyla*, *Rana*, *Triturus* (Yamaguti, 1961), *T. alpestris* (Walton, 1933; Buchvarov, 1977; Shimalov et al., 2000), *T. cristatus* (Walton, 1933; Shimalov et al., 2001), *T. vulgaris* (Shimalov et al., 2001), *Bo. bombina*, (Buchvarov, 1977; Grabda-Kazubska & Lewin, 1989; Kirin & Buchvarov, 2002), *B. viridis* (Schad et al. 1960; Buchvarov et al., 1975; Buchvarov, 1977; Vashetko & Siddikov, 1999; Masshaii, 2005; Düşen & Oğuz, 2010; Düşen et al., 2010; Düşen 2011), *B. bufo* (Buchvarov, 1977; Shimalov & Shimalov, 2001; Yıldırımhan & Karadeniz, 2007; Düşen & Oğuz, 2010; Düşen et al., 2010; Düşen 2011); *Pe. caucasicus* (Yıldırımhan et al., 2009), *H. arborea* (Buchvarov, 1977; Yıldırımhan et al., 2006c), *P. syriacus* (Buchvarov, 1977; Shimalov et al., 2000), *R. esculenta* (Walton, 1933; Buchvarov, 1977), *R. arvalis* (Cedhagen, 1988; Kuc & Sulgostowska, 1988b), *R. temporaria*, (Walton, 1933; Buchvarov, 1977; Kuc & Sulgostowska, 1988b), *R. graeca* (Božkov & Stojkova, 1970; Buchvarov, 1977), *R. holtzi* (Yıldırımhan et al., 2006b), *R. macrocnemis* (Schad et al. 1960; Yıldırımhan et al., 2006b; Düşen, 2007), *R. camerani* (Yıldırımhan et al., 2006a; Düşen, 2007), *R. dalmatina* (Buchvarov, 1977; Düşen et al., 2009), *R. tavasensis* (Düşen, 2012); *Chiasmocleis capixaba* (Van Sluys et al., 2006) and *A. fragilis* (Shimalov et al., 2000; Düşen et al., 2010b).

Geographic range: New and Old Worlds (Baker, 1987).

Specimens deposited: PAU-HELM-12/2009

Oxysomatium brevicaudatum (Zeder, 1800) Railliet and Henry, 1916

Prevalence, intensity and range: 22 of 298 hosts were infected (7.38 %, 8.86 ± 2.19 SE, 1 – 32).

Other reported hosts: *O. brevicaudatum* was reported from

different hosts of amphibians and reptiles in Europe and Asia, including *Bombina*, *Bufo*, *Hyla*, *Pelobates*, *Rana*, *Salamandra* (Yamaguti, 1961), *S. salamandra*, *S. atra*, *Pseudotriton ruber* and *Bo. bombina* (Walton, 1933), *T. vittatus*, *T. karelinii* (Yıldırımhan, 2008), *P. syriacus* (Yıldırımhan *et al.*, 1997a; Yıldırımhan & Bursey, 2010), *B. viridis* (Walton, 1933; Schad *et al.*, 1960; Buchvarov, 1977; Yıldırımhan, 1999a; Topçu & Bayrak, 2000; Düsen

BC: Body cavities, L: Lung, LI: Large intestine, M: Mesentery, OS: Organ surfaces, R: Rectum, S: Stomach, SI: Small intestine;
UB: Urinary bladder

varov, 1977; Kirin & Buchvarov, 2002), *P. fuscus* (Walton, 1933), *R. kurtmuelleri* (Hristovski et al., 2006), *A. fragilis* (Schad et al., 1960; Sharpilo, 2003; Düsen et al., 2010b), *N. natrix* (Schad et al., 1960).

Geographic range: Europe and Asia (Yamaguti, 1961). Schad et al. (1960) were first time reported *O. brevicaudatum* in *Bufo regularis* (probably *B. viridis*), *B. viridis*, *R. macrocnemis*, *R. ridibunda* and *A. fragilis* from Turkey. Sharpilo (2003) pointed out that *O. brevicaudatum* has a great disperse in *A. fragilis* in the Caucasian Region.
Specimens deposited: PAU-HELM-13/2009

Family: Dioctophymatidae

***Eustrongylides* sp. (larvae)**

Prevalence, intensity and range: Hosts infected, 3 of 298 (1.01 %, 1, 1).

Other reported hosts: *Eustrongylides* sp. is parasitic in glands of proventriculus of aquatic birds. Larvae normally inhabited connective tissue and body cavities of fishes (Yamaguti, 1961). Yıldırımhan et al. (1996b) and Aydoğdu et al. (1996a, 1996b, 1997 and 2000) recorded this nematode larvae in *N. natrix*, roach (*Rutilus frisii*), sheatfish (*Silurus glanis*), and tench (*Tinca tinca*) from Lake İznik (Bursa). Mihalca et al (2007) were recorded this nematode in *N. natrix* and *N. tessellata* in Romania. Anderson (2000) stated that the larvae of this nematode is observed in *R. ridibunda*. Düsen and Öz (2006) reported this nematode larvae in *R. ridibunda* from Antalya Region in Turkey.

Geographic range: Europe south-east Asia, the Middle East and Australia (Anderson, 2000).

Specimens deposited: PAU-HELM-14/2009

Family: Physalopteridae

***Abbreviata* sp.** (larvae - Encapsulated larvae in submucosa of stomach and small intestine).

Prevalence, intensity and range: Hosts infected, 35 of 298 (11.74 %, Uncountable).

Other reported hosts: Fernando (1989) observed this nematode larvae in *R. ridibunda* from Saudi Arabia; Fernando (1989) reported that parasite larvae in brown cysts where located subcutaneously on body wall, heavy infestations also occurred in the submucosae of stomach, small intestine and mesenteries and embedded deeply in them muscle. Similarly, Düsen and Öz (2006) observed this encapsulated larvae in submucosa of stomach and small intestines of *R. ridibunda* from Antalya region in Turkey. Borkovcová and Kopřiva (2005) recorded this nematode species in some lizards (*A. fragilis*, *L. viridis* and *L. agilis*) and one snake (*Coronella austriaca*) species in South Moravia (Czech Republic). In this study, the larvae of *Abbreviata* sp. were observed numerous (embedded deeply in submucosa of the stomach and small intestine) therefore counting was difficult.

Geographic range: Europe Asia, and Western Australia (Anderson, 2000).

Specimens deposited: PAU-HELM-15/2009

Acanthocephala

Family: Echinorhynchidae

***Acanthocephalus ranae* (Schrank, 1788) Lühe, 1911**

Prevalence, intensity and range: 63 of 298 hosts were infected (21.14 %, 4.92 ± 0.67 SE, 1 – 26).

Other reported hosts: *Rana* sp., *Bombinator* sp., *Hyla* sp., *Triturus* sp., *Salamandra* sp., *Diemictylus viridescens* (Yamaguti, 1963), *Bo. bombina* (Buchvarov, 1977; Grabda-Kazubska & Lewin, 1989; Yıldırımhan et al., 2001a), *Bo. variegata* (Buchvarov, 1977; Grabda-Kazubska & Lewin, 1989), *B. viridis* (Buchvarov, 1977; Yıldırımhan, 1999a; Vashetko & Siddikov, 1999; Shimalov & Shimalov, 2001; Düsen & Oğuz, 2010), *B. bufo* (Yıldırımhan & Karadeniz, 2007; Düsen, 2011), *B. calamita* (Shimalov & Shimalov, 2001); *H. arborea* (Düsen & Öz, 2004), *R. arvalis*, *R. dalmatina* (Buchvarov, 1977; Düsen et al., 2009); *R. temporaria* (Buchvarov, 1977; Cedhagen, 1988; Kuc & Sulgostowska, 1988b), *R. esculenta* (Buchvarov, 1977; Kuc & Sulgostowska, 1988b), *R. macrocnemis* (Yıldırımhan et al., 1997b; Yıldırımhan et al., 2006b; Düsen, 2007), *R. camerani* (Yıldırımhan et al., 2006a), *M. caucasica* (Yıldırımhan et al., 2001b; 2005b), *R. kurtmuelleri* (Hristovski et al., 2006), *R. tavaensis* (Düsen, 2012), *A. fragilis* (Shimalov et al., 2000), *N. natrix* (Yamaguti, 1963; Shimalov & Shimalov, 2000).

Geographic range: Europe, U.S.A., Russia (Yamaguti, 1963); Turkey (Oğuz et al., 1994).

Specimens deposited: PAU-HELM-16/2009

Family: Pomphorhynchidae

***Pomphorhynchus laevis* (Zoega in Müller 1776) (larvae and cysts)**

Prevalence, intensity and range: Hosts infected, 55 of 298 (18.45 %, 21.36 ± 1.33 SE, 1 – 79).

Other reported hosts: In general, *Pomphorhynchus laevis* occurs predominantly in cyprinid and also in salmonid fishes with the Palaearctic distribution (Dudiňák & Šnábel, 2001). *P. laevis*, is observed in several fish species in Turkey: barbel (*Barbus plebejus escherichii*), bleak (*Alburnus alburnus*), chub (*Leuciscus cephalus*), common carp (*Cyprinus carpio*), crucian carp (*Carassius carassius*), loach (*Nemachilus* sp.), nase (*Chondrostoma nasus*), pike (*Esox lucius*), sheatfish (*Silurus glanis*), (Öktener, 2003), and tench (*Tinca tinca*) (Yıldız, 2003). A number of marine and freshwater fishes have been reported as definitive hosts of acanthocephalan *P. laevis* (Ziolkowska & Rokicki, 2003). Buchvarov (1977) and Düsen and Oğuz (2008) observed in *Rana ridibunda* and Veith and Erpelding (1995) in fire salamander (*S. salamandra*) are reported *P. laevis*.

Geographic distribution: Europe Buchvarov (1977)

Specimens deposited: PAU-HELM-17/2009

Seventeen helminth species were found infecting *P. ridibundus*. The site of infection in the Eurasian marsh frog and the data on infection parameters for each host and helminth species are shown in Table 1. According the data

obtained 262 (87.91 %) *P. ridibundus* harbored the one or more species of helminths and the remaining 36 (%) 12.08 were uninfected. In summary, 4311 individuals of 17 helminth species were collected from the 298 *P. ridibundus* were examined. Digeneans and nematodes were observed in both large-small intestines, lungs, rectum, mesenteries and organ surfaces; cestode and acanthocephalans were also observed in small intestine of *P. ridibundus*. There were 2.57 ± 1.56 (1 – 7 with a range from) helminth species per infected host and there were 14.46 helminth individuals per infected host (except *Abbreviata* sp., uncountable). The helminth species that were observed in *P. ridibundus*, are common parasites of European anurans and also, some reptiles (e.g. *E. colubrimorum*), aquatic birds (e.g. *Eustromyliides* sp.) fishes (e.g. *P. laevis*) (Yamaguthi, 1958, 1961, 1963; Liang-Sheng, 1958; Buchvarov, 1977; Yıldırımhan, 1999; Anderson, 2000; Dudiňák & Šnábel, 2001; Düsen & Öz, 2006, Yıldırımhan et al., 2007, Düsen et al., 2010a; Düsen, 2012). *P. ridibundus* represents a new host record for *Nematotaenia dispar* in Turkey. The present study on the helminthfauna on *P. ridibundus*, Eurasian marsh frog in Denizli province (inner-west Anatolia region Turkey), offers a contribution to the present knowledge in this field.
